Specifications Grading Linda Nilson 2014-10-22 Linda Nilson puts forward an innovative but practical and tested approach to grading--the specifications grading paradigm--which restructures assessments to streamline the grading process and greatly reduce grading time, empower students to choose the level of attainment they want to achieve, reduce antagonism between the evaluator and the evaluated, and increase student receptivity to meaningful feedback, thus facilitating the learning process - all while upholding rigor. In addition, specs grading increases students' motivation to do well by making expectations clear, lowering their stress and giving them agency in determining their course goals. Among the unique characteristics of the schema, all of which simplify faculty decision making, are the elimination of partial credit, the reliance on a one-level grading rubric and the "bundling" of assignments and tests around learning outcomes. Successfully

completing more challenging bundles (or modules) earns a student a higher course grade. Specs grading works equally well in small and large class settings and encourages "authentic assessment." Used consistently over time, it can restore credibility to grades by demonstrating and making transparent to all stakeholders the learning outcomes that students achieve.

Green Chemistry Education Paul T. Anastas 2009 **Green Chemistry - a new approach to designing chemicals and chemical transformations** that are beneficial for human health and the environment - is an area that continues to emerge as an important field of study. Practitioners design to be more sustainable the materials, products, and processes that are the basis of our technologically advanced society and economy. Molecular designers are seeing new performance capabilities in the products, new efficiencies in the processes, and achievements in meeting the goals for protecting human health and the environment in a profitable way. Educators have recognized that Green Chemistry principles and practice have not been a part of traditional training in chemistry, and are not part of the skill sets of most practicing chemists. Leaders in Green Chemistry education have developed a wide range of new approaches, courses, tools, and materials that have been introduced and demonstrated in the chemistry curriculum in colleges and universities around the U.S. This ACS Symposium Series Book collects the current research and advances in the field of green chemistry, with an emphasis on providing educators with the knowledge and tools needed to incorporate recent information about this field into the chemistry curriculum. This volume is an outstanding resource for any chemical educator wishing to deepen, broaden, or begin the inclusion of green principles and practices into their teaching or research. Given the current interest in green chemistry, this timely book provides an invaluable snapshot of green chemistry education, highlighting best practices from the first decade of greening the chemistry curriculum.

Ungrading Susan D. Blum 2020-12 The moment is right for critical reflection on what has been assumed to be a core part of schooling. In *Ungrading*, fifteen educators write about their diverse experiences going gradeless. Some contributors are new to the practice and some have been engaging in it for decades. Some are in humanities and social sciences, some in STEM fields. Some are in higher education, but some are the K-12 pioneers who led the way. Based on rigorous and replicated research, this is the first book to show why and how faculty who wish to focus on learning, rather than sorting or judging, might proceed. It includes honest reflection on what makes ungrading challenging, and testimonials about what makes it transformative. CONTRIBUTORS: Aaron Blackwelder Susan D.
