100+ Horror Collection. Scary Stories to Read in Bed Tonight. Illustrated Edgar Allan Poe 2022-01-25 The oldest and strongest emotion of mankind is fear, and the oldest and strongest kind of fear is fear of the unknown. These facts few psychologists will dispute, and their admitted truth must establish for all time the genuineness and dignity of the weirdly horrible tale as a literary form... As may naturally be expected of a form so closely connected with primal emotion, the horror-tale is as old as human thought and speech themselves. H. P. Lovecraft Horror intends to create an eerie and frightening atmosphere for the reader. Prevalent elements include ghosts, demons, vampires, werewolves, ghouls, the Devil, witches, monsters, dystopian and apocalyptic worlds, serial killers, cannibalism, psychopaths, cults, dark magic, Satanism, the macabre, gore, and torture. Orphan of Creation Allen, Roger MacBride 2018-07-17 An anthropologist stumbles across a stunning secret that will put the very definition of humanity suddenly in doubt. Are the bones she discovers buried on an old Mississippi plantation the remains of humans, or apes -- or something else? The answer will turn her life, and the world, upside down. What the critics said about ORPHAN OF CREATION 'Allen's attention to detail is sterling...totally believable...well portrayed...dead accurate.... This book goes a long way toward doing for anthropology what Timescape did for high-energy particle physics: humanizing it, making its real workings accessible to a new audience. Anyone who likes good hard science in their fiction will have to go a long way to find a better-done book.' --Locus 'a novel that reminds us that moral and social evolution depends not only on our knowing where we are going, but remembering where we have been.' --Christian Science Monitor 'Allen's writing technique is a well-balanced blend of dialogue, action, description and narrative--each in proper proportion to the other... a fine read ... word of mouth will bring acclaim that is more than deserved.' --Otherrealms Orphan of Creation takes an interesting scientific premise and lets it loose upon real human beings revealing to the reader a higher level of understanding of the world. Orphan is science and fiction; in examining the human condition, it does what both ideally intend to do.' --The New York Review of Science Fiction 'Mr. Allen has found an idea worthy of his talent. The book has that unmistakably correct feel of authenticity. A very readable as well as thoughtful story. Bravo to Mr. Allen for writing this risky book. Read it. Then pass it on to your mundane friends. With any luck, it will drive them crazy.' --Lan's Lantern FoxAcre Press is proud to present its books on the Google Play store.

Sexual Dimorphism of the Bed Nucleus of the Stria Terminalis and the Amygdala Nadya Stefanova 2012-12-06 Sex differences are observed in various physiological, behavioral, and psychic functions, including reproductive behavior, aggression, emotions, and cognition. Such differences are expressed even in early childhood with preferences to definite activities. It has been generally accepted that differences between genders are formed under the influence of biological as well as environmental factors. The existence of sex differences in functions of the central nervous system has suggested that there are also morphological sex differences. In recent years several reports on sexual dimorphism in the brain of vertebrates have been published. However, the mechanisms of sexual differentiation of the central nervous system remain unclear in most cases. It is often difficult to correlate morphological sex differences to differences in definite function or behavior. We set out to explore the sexual dimorphism of the limbic system and especially the bed nucleus of the stria terminalis and the amygdala, which are considered generally to be occupied with the control of reproductive behavior and autonomic and complicated psychic functions. Several reports on sexual dimorphism of these structures have been published. Some of them have been directed to the total neuronal number and the volume of the nuclei, while others have concentrated on definite subpopulations of neurons. In many cases the mechanisms of sexual differentiation were tested, but sometimes they could not be established.
