Becoming a teacher Josef de Beer 2020-12-31 This book disseminates original research on learning in and from practice in pre-service teacher education. Authors such as Lederman and Lederman describe the student teaching practicum (or work-integrated learning [WIL]), which is an essential component of pre-service teacher education, as the 'elephant in the room'. These authors note that 'the capstone experience in any teacher education programme is the student teaching practicum... [a]fter all, this is where the rubber hits the road'. However, many teacher educators will agree that this WIL component is sometimes very insufficient in assisting the student teacher to develop their own footing and voice as a teacher. This is the 'gap' that this research book addresses. Most of the chapters in the book report empirical data, with the exception of two chapters that can be categorized as systematic reviews. WIL is addressed from various angles in the chapters. Chapter 6 focuses on research related to what makes Finnish teacher education so effective, and in Chapter 4 researchers of the University of Johannesburg disseminate their findings on establishing a teaching school (based on Finnish insights) in Johannesburg. Chapter 3 highlights the challenges faced in open-and distance learning teacher education contexts. Several of the chapters disseminate research findings on alternative interventions to classic WIL, namely, where "safe spaces" or laboratories are created for student teachers to learn and grow professionally. These could either be simulations, such as software programmes and avatars in the intervention described in Chapter 2; student excursions, as the findings in chapters 5, 7 and 10 portray; or alternative approaches to WIL (e.g. Chapters 11 and 12). The book is devoted to scholarship in the field of pre-service teacher education. The target audience is scholars working in the fields of pre-service teacher education, work-integrated learning, and self-directed learning. The book makes a unique contribution in terms of firstly its extensive use of Cultural-Historical Activity Theory as a research lens, and secondly in drawing on various theoretical frameworks. Both quantitative and qualitative research informed the findings of the book.

HIV Prevention Kenneth H. Mayer 2009-03-13 HIV/AIDS continues to be the pandemic of our times and there has not been a comprehensive medically based AIDS prevention book published in the last 5 years. It is estimated that 36 to 45 million people including 2-3 million children already are infected worldwide and an additional 4-7 million more are infected each year. There are about 6,000 new infections daily and about 12 million AIDS orphans. People receiving AIDS treatments feel well and have no detectable viral load, but still can infect others. And even when a vaccine is found, it will take many years before it can be administered across the developing world. * Discusses all aspects of AIDS prevention, from epidemiology, molecular immunology and virology to the principles of broad-based public health prevention interventions. * Special focus on the array of interventions that have been proven effective through rigorous study * Identifies new trends in HIV/AIDS epidemiology and their impact on creating and implementing prevention interventions * Incorporates virology, biology, infectious diseases, vaccinology, microbicides and research methodologies into AIDS prevention

International Handbook on the Demography of Sexuality Amanda K. Baumle 2013-05-13 The International Handbook on the Demography of Sexuality is the first book to specifically address the study of sexuality from a demographic perspective. Demographic research has largely paid little attention to sexuality as a whole, or sexual orientation in particular, other than in studies examining the "consequences" of sex – sexually transmitted infections or fertility. Instead, the content of this handbook explores population sexuality in order to describe the prevalence of sexual behaviors, desires, and identities, as well as their connections with other demographic outcomes. The focus is on analyzing sexuality as a demographic topic in its own right, rather than solely as a variable in studies of sexually transmitted infection or other health-related topics. In this book, both researchers with traditional demographic backgrounds, as well as those with training in other disciplines, provide an overview of the state of current research on population sexuality. These chapters provide a foundation for the development of research in the burgeoning field of the demography of sexuality.

Dietary Reference Intakes for Vitamin A, Vitamin K, Arsenic, Boron, Chromium, Copper, Iodine, Iron, Manganese, Molybdenum, Nickel, Silicon, Vanadium, and Zinc Institute of Medicine 2002-07-19 This volume is the newest release in the authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

Evaluation of PEPFAR Division of Behavioral and Social Sciences and Education 2013-07-27 The U.S. government supports programs to combat global HIV/AIDS through an initiative that is known as the President's Emergency Plan for AIDS Relief (PEPFAR). This initiative was originally authorized in the U.S. Leadership Against HIV/AIDS, Tuberculosis, and Malaria Act of 2003 and focused on an emergency response to the HIV/AIDS pandemic to deliver lifesaving care and treatment in low- and middle-income countries (LMICs) with the highest burdens of disease. It was subsequently reauthorized in the Tom Lantos and Henry J. Hyde U.S. Global Leadership Against HIV/AIDS, Tuberculosis, and Malaria Reauthorization Act of 2008 (the Lantos-Hyde Act). Evaluation of PEPFAR makes recommendations for improving the U.S. government's bilateral programs as part of the U.S. response to global HIV/AIDS. The overall aim of this evaluation is a forward-looking approach to track and anticipate the evolution of the U.S. response to global HIV to be positioned to inform the ability of the U.S. government to address key issues under consideration at the time of the report release.

Statistical Methods for Global Health and Epidemiology Xinguang Chen 2020-04-13 This book examines statistical methods and models used in the fields of global health and epidemiology. It includes methods such as innovative probability sampling, data harmonization and encryption, and advanced descriptive, analytical and monitory methods. Program codes using R are included as well as real data examples. Contemporary global health and epidemiology involves a myriad of medical and health challenges, including inequality of treatment, the HIV/AIDS epidemic and its

subsequent control, the flu, cancer, tobacco control, drug use, and environmental pollution. In addition to its vast scales and telescopic perspective; addressing global health concerns often involves examining resource-limited populations with large geographic, socioeconomic diversities. Therefore, advancing global health requires new epidemiological design, new data, and new methods for sampling, data processing, and statistical analysis. This book provides global health researchers with methods that will enable access to and utilization of existing data. Featuring contributions from both epidemiological and biostatistical scholars, this book is a practical resource for researchers, practitioners, and students in solving global health problems in research, education, training, and consultation.

Preventing HIV Among Young People in Southern and Eastern Africa Kaymarlin Govender 2020-12-31 This book provides an overview of the current epidemiology of the HIV epidemic among young people in Eastern and Southern Africa (ESA) and examines the efforts to confront and reduce the high level of new HIV infections amongst young people. Taking a multi-dimensional approach to prevention, the contributors discuss the many challenges facing these efforts, in view of the slow progress in curbing the incidence of HIV amongst young people, focusing particularly on the structural and social drivers of HIV. Through an examination of these issues, chapters in this book provide valuable insights on how to mitigate HIV risk among young people and what can be regarded as the catalysts to mounting credible policy and programmatic responses required to achieve epidemic control in the region. The contributors draw on examples from a range of primary and secondary data sources to illustrate promising practices and challenges in HIV prevention, demonstrating links between conceptual approaches to prevention and lessons learnt from implementation projects in the region. Bringing together social scientists and public health experts who are actively engaged in finding effective solutions, the book discusses 'which interventions works', 'why they work', and the limitations and gaps in our knowledge to curb the pandemic amongst young people. As such it is an important read for researchers focusing on HIV/AIDS and public health.

Care Ethics and Political Theory Daniel Engster 2015 Care Ethics and Political Theory brings together new chapters on the nature of care ethics and its implications for politics from some of the most important philosophers working in the field today. Chapters take up long-standing questions about the relationship between care and justice and develop guidelines for the development of a care-based justice theory. Care ethics is further applied to issues such as security, privacy, law, and health care where little work has been previously done. By bringing care ethics into conversation with non-Western and subaltern cultures, the contributing authors further show how care ethics can guide and learn from other traditions. A final set of chapters uses care ethics to challenge dominant moral and political paradigms and offer an alternative foundation for future moral and political theory. The book as a whole makes the case for care ethics as an equal or superior approach to morality and politics compared with liberalism, luck egalitarianism, libertarianism, the capabilities approach, communitarianism, and other political theories. The volume includes many of the leading care scholars in the world today engaging in both theoretical and applied discussions of this burgeoning field of study. Ultimately, Care Ethics and Political Theory endeavors to find realistic methods and ways of thinking to create a more caring world.

Culture and Conflict in Child and Adolescent Mental Health M. Elena Garraida 2008 'The theme of the 18th World Congress of the International Association for Child and Adolescent Psychiatry and Allied Professions - IACAPAP - is 'Carrying Hope Between East and West for 3 C's: Children, Cultures, Commitments'. The aim of the congress book, to be presented in Istanbul in the Spring of 2008, is to focus interest on the effects of turmoil on children. It is necessary that mental health professionals start to plan how to meet children of immigrants and refugees and to develop the necessary services and methods to support those coming with a burden of psychiatric need.' Per-Anders Rydelius, M.D., Ph.D.

The Adolescent Fyodor Dostoevsky 2007-12-18 The narrator and protagonist of Dostoevsky's novel *The Adolescent* (first published in English as *A Raw Youth*) is Arkady Dolgoruky, a naïve 19-year-old boy bursting with ambition and opinions. The illegitimate son of a dissipated landowner, he is torn between his desire to expose his father's wrongdoing and the desire to win his love. He travels to St. Petersburg to confront the father he barely knows, inspired by an inchoate dream of communion and armed with a mysterious document that he believes gives him power over others. This new English version by the most acclaimed of Dostoevsky's translators is a masterpiece of pathos and high comedy.

An Accidental Family Fyodor Dostoyevsky 1994 Set in the 1870s, a time of social disorder in Russia, *An Accidental Family* is the story of Arkady Dolgoruky, an awkward, illegitimate twenty-year-old on a desperate search for his family. The Politics of Electoral Systems Michael Gallagher 2008-01-10 Electoral systems matter. They are a crucial link in the chain connecting the preferences of citizens to the policy choices made by governments. They are chosen by political actors and, once in existence, have political consequences for those actors. They are an important object of study for anyone interested in the political process, and in this book we subject them to systematic analysis. In addition to some comparative chapters, the book contains full accounts of the operation of electoral systems in 22 countries: France, the UK, Germany, Italy, Israel, Spain, Austria, Belgium, Denmark, Finland, The Netherlands, Ireland, Hungary, Russia, Australia, Canada, India, the USA, Japan, New Zealand, Chile, and South Africa. The book provides detailed analyses of the operation of a diverse set of electoral systems in their national context. Each chapter explains how the electoral system really works in the given country, examining the strategic incentives the system provides to voters, candidates, and parties. All country chapters have a common format and structure. Successive sections analyse: the institutional context; how each electoral system was chosen historically; how the current electoral system operates (the rules, mechanics, and ballot structure); and the political consequences of the current system (the impact on the party system, the internal life of parties, and the impact on parliament and government formation). Each country chapter then contains a final section which focuses on the politicization of electoral institutions. In recent years many countries have changed their electoral systems, either entirely or in part so there is a strong focus on the processes of electoral reform, both historically and prospectively. The book concentrates on the real world 'politics', as well as the 'political science' of electoral systems. The book will be of interest to those concerned with the practical political business of electoral reform. The book contains a wealth of evidence about the performance of various kinds of proportional representation and of non-PR systems. This will be invaluable for anyone interested in the question: 'What would be the best electoral system for my country?'

Elections in Africa Dieter Nohlen 1999-07-22 Elections have always been an integral part of post-independence African politics and have assumed utmost importance in the course of recent democratisation processes. However, comparative research on the political development in Africa lacks reliable electoral data. *Elections in Africa* fills this gap. The handbook is the only reliable source for African elections from independence to present. In the first volume of this series, *Elections in Africa* presents a country-by-country study of African nations that provides a comparative introduction on elections and electoral systems. Each country chapter examines the history of the institutional and electoral arrangements, the evolution of suffrage and current electoral provisions. Precise and exhaustive data on national elections and referendums are presented comparatively. The book provides a definitive and comprehensive set of data on elections and electoral systems in order to facilitate comparative research. Data is presented in a systematic manner allowing for both historical and cross-national comparisons.

Children and Young People Living with HIV/AIDS Pranee Liamputtong 2016-06-14 This book focuses on the issues encountered by children and young people who are living with HIV/AIDS. It examines their lived experiences associated with HIV/AIDS, and studies groups of children and youngsters from around the globe. Connecting empirical information with real-life situations, the book brings together results from empirical research

that relates to these children and young people. Its chapters can be used as evidence for health care providers to implement socially and culturally appropriate services to assist individuals and groups of children and young people who are living with HIV/AIDS in many societies. Many of these young people are from the most marginalized and vulnerable groups; and many have been orphaned by the death of their HIV-positive parents. Marginalized young people such as refugees, migrants and street children are most at risk due to the use of illicit drugs, their exposure to unprotected sex (in exchange for food, money and protection), and stigma associated with their marginalized lives. The impact that HIV/AIDS has on the opportunities for these young people to be able to lead healthy adult lives is considerable. This book gives a voice to these children and young people and advances our understanding of their lived experiences and needs.

Preventing HIV through safe voluntary medical male circumcision for adolescent boys and men in generalized HIV epidemics World Health Organization 2020-08-31 Since 2007 the World Health Organization (WHO) and the Joint United Nations Programme on HIV/AIDS (UNAIDS) have recommended voluntary medical male circumcision (VMMC) as an important strategy for the prevention of heterosexually acquired HIV in men in settings where the prevalence of heterosexually transmitted HIV is high. Over 25 million men and adolescent boys in East and Southern Africa have been reached with VMMC services. These new guidelines update earlier WHO recommendations to maximize the HIV prevention impact of safe VMMC services and aim to guide the transition to the sustained provision of interventions with a focus on the health and well-being of both adolescent boys and men.

The Science of Adolescent Risk-Taking National Research Council 2011-02-25 Adolescence is a time when youth make decisions, both good and bad, that have consequences for the rest of their lives. Some of these decisions put them at risk of lifelong health problems, injury, or death. The Institute of Medicine held three public workshops between 2008 and 2009 to provide a venue for researchers, health care providers, and community leaders to discuss strategies to improve adolescent health.

HIV and Young People Gary Jones 2015-11-30 Revisiting the thinking on vulnerability to HIV and risk of infection, this book provides better understanding by considering the risk of HIV infection alongside notions of personal and collective resilience, dignity and humiliation. The work shows that young people in the urban slum dignify their world and, in doing so, establish priorities and draw on a set of references oftentimes intelligible to them alone. Moreover, humiliation, as an interpersonal event, adds to a sense of vulnerability and lies closely behind choices directly affecting personal health and livelihood. Thus, dignity and humiliation are shown for the first time to have a critical role in health seeking and risky behavior related to HIV, and this is an area in great need of further research. The crucial focus of this work is further emphasized by the rapid growth of urban slums, and high rates of HIV among both slum dwellers and young people, who continue to bear the brunt of the AIDS epidemic, thirty years on. This comprehensive literature review provides a compelling argument that the time is right to further explore the nexus of risk and resilience from a people-centered perspective. Fresh insight is critical to reach the goal of ending AIDS by 2030.

HIV/AIDS in South Africa 25 Years On Poul Rohleder 2009-09-01 Much has happened since the first appearance of AIDS in 1981: it has been identified, studied, and occasionally denied. The virus has shifted host populations and spread globally. Medicine, the social sciences, and world governments have joined forces to combat and prevent the disease. And South Africa has emerged as ground zero for the pandemic. The editors of *HIV/AIDS in South Africa 25 Years On* present the South African crisis as a template for addressing the myriad issues surrounding the epidemic worldwide, as the book brings together a widely scattered body of literature, analyzes psychosocial and sexual aspects contributing to HIV transmission and prevention, and delves into complex intersections of race, gender, class, and politics. Including largely overlooked populations and issues (e.g., prisoners, persons with disabilities, stigma), as well as challenges shaping future research and policy, the contributors approach their topics with rare depth, meticulous research, carefully drawn conclusions, and profound compassion. Among the topics covered: The relationship between HIV and poverty, starting from the question, "Which is the determinant and which is the consequence?" Epidemiology of HIV among women and men: concepts of femininity and masculinity, and gender inequities as they affect HIV risk; gender-specific prevention and intervention strategies. The impact of AIDS on infants and young children: risk and protective factors; care of children by HIV-positive mothers; HIV-infected children. Current prevention and treatment projects, including local-level responses, community-based work, and VCT (voluntary counseling and testing) programs. New directions: promoting circumcision, vaccine trials, "positive prevention." South Africa's history of AIDS denialism. The urgent lessons in this book apply both globally and locally, making *HIV/AIDS in South Africa 25 Years On* uniquely instructive and useful for professionals working in HIV/AIDS and global public health.

By locating the insights drawn from a major empirical research reported in *Young People, New Media* within a survey of the burgeoning but fragmented research literature on ne
