Learn Excel® VBA in 24 Hours Liaw HockSang 2016-09-13 Visual Basic for Applications (VBA) is the programming language built into Microsoft Office applications (such as Microsoft Excel, Microsoft Word, Microsoft Access, and Microsoft Outlook) to automate various tasks in their own environment and to work with other applications. This book focuses on VBA in Microsoft Excel for Windows. The discussions in the book are applicable to Excel 2007, Excel 2010, Excel 2013, and Excel 2016, unless otherwise stated. It starts with Chapter 1, which is to get you familiarize with some essential tools that help you to write your VBA programs. Chapter 2 covers the places where you should store your VBA code. Chapter 3 is the fundamentals of programming in VBA. It provides you a quick reference in writing syntax error-free VBA code, in debugging, and in handling errors. Chapter 4 offers some other tips on VBA programming. This book is for readers who are new to Excel VBA, but should have a basic understanding of programming language, such as C or Python. The reader should be an average Excel user who knows, for example, what an array formula is. If you are new to Excel, please teach yourself Excel before exploring the chapters. You may refer to another book written by me entitled Learn Microsoft Excel 2010-2016 for Windows in 24 Hours - A jumpstart to be an intermediate user, which was written for those who are new to Excel. This book does not serve as a comprehensive reference for intermediate users. Nevertheless, it is a jumpstart for beginners to learn Excel VBA. It is also served as a foundation for my future books and other references that are beyond the reach of beginners. I hope this book will shorten your time to teach yourself Excel VBA and serve as a quick reference in writing error-free and working VBA programs in realizing your goal. Let Excel VBA work for you. A supplementary Excel file to share The author would like to share a supplementary Excel file. It contains almost all the code listings and code statements stated in this book. Excel VBA Maayan Poleg 2013-09-23 Microsoft Excel has, over the years, become the greatest software in the field of electronic worksheets. Its strength is that it meets the demands of huge numbers of users worldwide. Nonetheless - despite the advancement and expanding use of this software - there is ever-increasing demand from the end users; much of which can only be solved by VBA programming (Visual Basic for Applications). Therefore, "Excel VBA - In Everyday Language" was written in order to provide a response to the growing demand for the advanced capabilities of Microsoft Excel. This book was written: \* For the "non-programmers" among us who have to create the same reports in Microsoft Excel time and again, and would like to automate the process. \* For people who wish to develop forms, screens and "machines" for data management within their organization. \* For individuals who wish to turn Microsoft Excel into a powerful tool in their daily work. During the writing process I tried to visualize Microsoft Excel software and the VB editor through the eyes of the end users; people who may not have programming background, but aspire to reap the utmost from the program. For this reason the book, based on many years' of experience in programming and training, has been written in everyday language, using as few technical terms as possible, to make for easy reading. My goal, when writing this book, was to convey the main principles of VBA language and allow beginners, taking their first steps, to learn without requiring individual training. For this purpose there are files of exercises accompanying the book. These may be downloaded from this link. The exercise files are in .xls format, allowing the end users to use either the "Ribbon Versions" (2007 and higher) or other older versions of Microsoft Excel. This new edition has undergone extensive processing and addresses Microsoft Excel 2010/2013 users, along with explanations for anyone using the older versions (2003 and 2007). Therefore, wherever there is a significant difference between Excel 2010/2013 and the old versions, explanations are provided in full. While reading the book and using the practice files, you will know to: \* Add the Developer Tab \* Change Excel's security, including trusted locations \* Enter the VBE (Visual Basic Editor) \* Change the VBE structure \* Record an absolute macro \* Record a relative macro \* Improve your recorded macro \* Apply to ranges (Cells, ranges, columns, rows, sheets, offset) \* Use Variables \* Use the 'With' command \* Manipulate strings \* Calculate Date and Time \* Interact with the user (Msgbox and Inputbox) \* Use conditions (IF) \* Loop through data (Do loops, For loops) \* Create your own functions (UDF) \* Create an Event macro \* Handle Errors You will also learn some cool tips and tricks, and get some useful codes
